

Final Project Report

CS2111 Final Project Summary

INSTRUCTIONS: Type out your answer directly below each question. If a question does not apply to your project, type in N/A. When finished, save this file as a PDF and upload it to the Blackboard.

BASICS

Your group members?

- Ghala Alghamdi [S23108212](#)
- Hiba Amanulla [S23108227](#)

What is the topic of your final project?

The topic of our project is a dynamic travel booking website where users can browse trips, book their travel, and manage their bookings, while admins can manage trips, bookings, and users. We named our website “**Dreamscape Destinations**”.

Who is the intended audience?

The intended audience for this travel booking website includes individuals or groups of people who are looking to plan and book vacations, whether they are spontaneous travelers or those who prefer organized itineraries. The site targets a wide demographic, from young adventurers to families seeking relaxation, and is designed for people who want to find tailored travel experiences quickly and efficiently.

Provide a brief summary of the functionalities of your project.

- **Trip browsing:** Users can browse a wide selection of curated trips that include essential details such as location, description, pricing, and itinerary.
- **Booking system:** Users can select their desired trip, enter travel details such as check-in/check-out dates, travel class, the number of passengers, and book the trip directly on the site.
- **Login/Signup:** Users can create a new account or login to an existing one using their credentials.

Final Project Report

- **User dashboard:** Once logged in, users can access a personalized dashboard that displays their profile, upcoming trips with countdowns, current ongoing trips, and past trip history. Users can also edit their profile information, like username and password.
- **Admin panel:** Admins have access to a separate dashboard that allows them to manage trips, bookings, and user profiles.
- **Booking management:** Users can view and modify their bookings, and cancel or reschedule trips.
- **Logout:** Shows a pop up that allows users to logout of their account.

FRONT-END

What is the total page count?

- **Home (1 page):** The landing page showcasing featured trips and includes the booking form.
- **Trips (1 page):** A page listing all available trips with brief summaries and options to search by title or location.
- **Individual Trips (10 pages):** A detailed page for each trip including the description, itinerary, and pricing details of each class.
- **About Us (1 page):** A detailed page providing information about the travel agency.
- **Account (1 page):** Forms for creating a new user account or logging into an existing one to book a trip.
- **User Dashboard (1 page):** The user's personalized space where they can manage their bookings, view their trips, and manage profile information.
- **Admin Panel (4):** The admin panel includes separate pages for welcoming the admin and managing trips, bookings, and users.
- **Confirmation (1 page):** A page that's shown after the user makes a successful booking, displaying the booking information along with the payment details.

Total pages: 20

(15 main pages + 4 admin management pages + 1 confirmation page)

Final Project Report

List the names of any external stylesheet used in this project below.

- **styles.css:** custom stylesheet shared among pages.
- **Google fonts:** used for fonts and navigation bar icons.

List any CSS libraries/frameworks used in this project (e.g. Bootstrap) below.

- **Bootstrap 5:** used for responsive design, layout, and styling components.

List any JavaScript libraries/frameworks used in this project below.

- **Bootstrap 5 JavaScript Components:** Used for interactive features like carousels, accordions, modals, and real-time alerts.

How does your project meet the Interactivity requirement?

- The project uses **Bootstrap's JavaScript components** such as **carousels**, **accordions**, and **modals** to provide interactive user experiences.
- Users can **search for trips** dynamically on the trips page, making it easy to find specific destinations using search bar.
- Logged-in users can **book trips**, **edit the status of their bookings** (confirm or cancel pending trips), and **cancel trips** directly from their dashboard without deleting the records from the database.
- Users can also **edit their profile information** including updating their username or password through interactive editing modals that display error/success alerts.
- Admins have interactive control panels where they can **search**, **edit**, and **add new trips**, **manage bookings**, and **add new users**.
- Forms throughout the website provide **real-time validation** and **feedback messages using Bootstrap's success/error alerts** to users after actions like booking, editing, or cancelling.
- The entire layout is **responsive** and **mobile-friendly**, offering seamless interaction across all screen sizes without reloading or breaking design.

Final Project Report

Final Project Report

Where in your project do you insert a record to the database (the 'C' in CRUD)?

- **Booking Insert:** When a user completes the booking form, the system inserts a new record into the bookings table, storing details such as trip ID, user ID, class, number of passengers, and booking status. This happens in (submit-booking.php).
- **Admin Trip Insert:** Admins can add new trips via the admin dashboard (manage_trips.php), where new trip records are inserted into the trips table with details like location, description, price, and itinerary.
- **Admin User Insert:** Admins have the ability to add new users to the system. This is done through a (manage_users.php) section in the admin dashboard, where a form allows admins to input details such as username, email, password, and other user information. The new user record is then inserted into the users table.
- **User Account Signup:** During the signup process, the system creates the user account and adds it to the users table in the database.

Where in your project do you search and display record(s) from the database (the 'R' in CRUD)?

- **User Dashboard:** In the user dashboard, the system fetches and displays user-specific data, such as profile information from the users table and upcoming/current/past bookings from the bookings table.
- **Trips List:** On trips page, available trips are fetched from the trips table and dynamically displayed. The trips page also includes a search feature that allows users to search for specific trips based on criteria such as location or trip name.
- **Booking Overview:** Admins can view booking records through the (manage_bookings.php) page, displaying details about each booking in the system.
- **Trip Search:** Admins can search and filter through the list of trips in the admin panel (manage_trips.php). This functionality allows them to find trips based on location or trip name.
- **User Display:** Admins can view all users details through (manage_users.php).

Final Project Report

Where in your project do you update an existing record(s) the database (the 'U' in CRUD)?

- **User Profile Update:** Users can update their profile information, such as email and password, in (edit-profile.php), which triggers an update to the users table.
- **Booking Status Update:** Admins can modify the status of bookings (from pending to confirmed or cancelled, for example) in (manage_bookings.php).
- **Trip Status Update:** Users can update the status of trips. Confirmed or pending trips can be marked as cancelled. This functionality is handled in (cancel-trip.php).
- **Booking Update:** Users can edit their booking information like check-in/check-out dates, number of passengers, and travel class. This is handled in (edit-profile.php).

Where in your project do you delete existing record(s) from the database (the 'D' in CRUD)?

- **Trip Deletion:** Admins can delete trips that are no longer available through (manage_trips.php).
- **User Deletion:** Admins can delete user accounts if necessary through the (manage_users.php) page.

MISC

If your project requires any admin credentials (i.e. only admin users can access a certain page), list the credentials below.

Admin pages are secured with session validation to ensure only authenticated admins (**Email:** admin@dreamscape.com / **Password:** [admin123](#)) can access the admin dashboard.

Provide any other information that you think the grader/instructor should know when grading your final project below.

- The website provides full functionality for booking trips, managing bookings, and handling user profiles, allowing users to seamlessly interact with the platform.
- The admin panel is fully integrated, enabling administrators to manage trips, bookings, and users with ease.

Final Project Report

- User authentication is managed through **session handling**, ensuring secure logins and personalized experiences for each user.
- Bookings can only be made by **logged-in users**, ensuring that only authenticated users can complete reservations.
- **Admin dashboard pages** are protected by authentication and are **accessible only to admins**, providing secure access control.
- The website is built with a **responsive design** using **Bootstrap 5**, ensuring it adapts seamlessly to different screen sizes and devices.
- **Custom PHP logic** is utilized for all **CRUD operations**, with a robust **MySQL database integration** for storing and retrieving data.
- The project avoids heavy libraries like jQuery, opting instead for **Bootstrap's lightweight JavaScript**, which enhances performance and keeps the site optimized.
- The **db_config.php** file is used for **secure database connection management**, centralizing and protecting database credentials.

Final Project Report

Manage Users page:

The screenshot shows a web browser window with the URL `localhost/webproject/manage_users.php`. The page title is "Manage Users". At the top, there is a navigation bar with the text "Dreamscape Destinations - Admin" and several menu items: "Dashboard", "Manage Trips", "Manage Bookings", "Manage Users", and "Logout".

Below the navigation bar, there is a form to add new users. It consists of three input fields labeled "Username", "Email", and "Password", and an "Add" button.

Below the form, there is a table with the following columns: "User ID", "Username", "Email", and "Actions". The table contains six rows of user data:

User ID	Username	Email	Actions
1	admin	admin@dreamscape.com	Delete
2	alice	alice@mail.com	Delete
3	bob	bob@mail.com	Delete
4	charlie	charlie@mail.com	Delete
5	diana	diana@mail.com	Delete
6	eric	eric@mail.com	Delete
